

## PAL14

### Paper Pick and Lift Unit

### Description

This is the ultimate Rhin-O-Tuff punch solution and can be added to your HD7000 as your requirements grow. The PAL 14 (Picks a Lift) system completes your desktop automated punching system when used with APES 14. The PAL 14 is simply attached to the top of your HD7000 and electrically linked to the APES 14. All you have to do is stack your collated paper, cover materials and dividers on the PAL and using the Pick selector, simply dial in the appropriate amount of material you require it to lift. The PAL system will then select the correct amount of material to punch and lift so that you can easily pick it up and place it in the punching throat, where (if using the Apes system), it will automatically punch and eject the sheets into the APES 14 stacker unit. Virtually eliminating miss fed sheets and maintaining the correct collated sequence of sheets, the PAL 14 with the APES 14 system will increase your productivity by some 50%.

**PLEASE NOTE: The above image is the PAL14 attached to the HD7000.**

### Features and Benefits

- Accepts paper between 140mm x 140mm to 356mm x 356mm.
- Will accept paper, covers and tab dividers.
- used with the APES 14 system, will increase productivity by up to 50%.
- Provides average page count accuracy of +/- 3 sheets.

### Related Equipment

- Rhin-o-tuff HD and OD punch series
- APES 14 System

### Technical Specification

Dimensions (mm):	H 356 x W 406 x D 470
Weight:	16 Kgs
Power Requirements:	240v 50Hz
Method of Operation:	Power switch
Safety Approvals:	CE/TUV
